

## Background

The Regulation, Evaluation, Authorization, and Restriction of Chemicals (REACH) is a European Community Regulation related to the safe use and identification of chemicals (Regulation (EC) Number 1907/2006).

REACH entered into force on June 1, 2007 with the aim of improving the protection of human health and the environment through better and earlier identification of the intrinsic properties of chemical substances. REACH was aimed at streamlining and improving former European Union chemical legislation by replacing approximately 40 individual pieces of legislation and harmonizing with the remaining legislation. The new legislative framework under REACH shifts responsibility for the control and safety of chemicals from government authorities to industry and created the European Chemicals Agency to act as a central coordinator.

Xilinx packaged devices are delivered in compliance with the following requirements for hazardous substances, and all noted exceptions would be listed here.

Regulations	Comment	Remark
(EU) 2019/1021 Annex I	Comply with the conditions limit of list of substances of Annex I	There are a total of 27 substances listed in Part A of Annex I according to EU published Regulation (EU) 2019/1021 of the European Parliament and of the Council of 4 JUL. 2020 on persistent organic pollutants. <a href="https://echa.europa.eu/list-of-substances-subject-to-pops-regulation">https://echa.europa.eu/list-of-substances-subject-to-pops-regulation</a>

## Xilinx Responsibilities

Xilinx is a supplier of “articles” as defined in REACH. The “substances” contained in these articles are not intended to be released under normal or reasonably foreseeable conditions of use.

Xilinx will continue to monitor REACH developments and will comply with any applicable requirements. As Substances of Very High Concern (SVHCs) are added to Annex XIV of the Regulation (Authorization List), Xilinx will assess whether both of the following conditions are met:

1. The substance is present in the articles in quantities over one (1) ton per year
2. The substances are present in Xilinx® devices, development products and packing material above a concentration level of 0.1% w/w

Xilinx shall comply with the requirements of Article 7(2) and Article 33 of the Regulation, as necessary.

For informational purposes, Xilinx has contacted its material and manufacturing vendors who have confirmed to Xilinx that Xilinx devices, development products, and packing material do not intentionally contain SVHCs above a concentration level of 0.1% w/w. However, regarding 4,4'-isopropylidenediphenol (Bisphenol A), some suppliers of substrate materials have reported Bisphenol A as a raw polymer ingredient of <0.3wt%. With regard to 2-methyl-1-(4-methylthiophenyl)-2-morpholinopropan-1-one, some suppliers of substrate materials have reported it is used for Photoinitiator as <1.5wt% in the concentration level. However, it does comply with

Substrate:<0.1wt%(w/w) These substances are contained in the material as a small residue in the molecular form and cannot be released under normal conditions. With regard to lead, certain legacy devices utilize solder paste and solder balls containing 37% lead. In addition, Xilinx is compliant with the substance restrictions listed in REACH Annex XVII that limits the use of certain substances for specific uses.

**Table 1:** Candidate List of SVHCs defines the substances published by the European Chemicals Agency (ECHA) on the current Candidate List. Xilinx devices, development products, and packing material do not intentionally contain SVHCs above a concentration level of 0.1% w/w, except as noted in Items 76, 170, and 204.
